

URS4/S6 Serpentine Belt Tensioner Pulley

I have recently discovered a serpentine belt pulley that is an almost exact replacement for our pulleys. I currently have them on 3 test cars as of 11/02/2012 with a combined 500 miles with no issues. Given the dimensions I should see no issue that should arise.

The part number I originally sought out was a Volvo number 272136. The issue with that pulley was that most suppliers did not sell it with a dust shield and the ones I would get had no provision for the current dust shield that our tensioners use.

Finally I came across a cross reference that said the Volvo 272136 was the same as a VW/Audi number. This number 059145276 is used on a diesel in non North American applications however I was also able to cross it to a Febi number that is shared. This number, 19734, has the VW/Audi number on the box and is an almost exact replacement. See pictures attached:

The Febi pulley comes with a new dust cap that fits perfect on our tensioners. I have found that the minor difference in height has had no issue. The Febi 19734 will work. You can try using just the VW/Audi 059145276 number and it should work as well. The Volvo number 272136 will work but won't come with a dust shield or have a spot to use your current shield. If you don't care about the shield or attempt to make your own you could use the Volvo number.

I may have a few of these pulley available soon. You're welcome to email me with any questions.
